

Drive technology adoption by creating competent, confident users.

Meet the virtual lab platform that helps users realize your solution's full potential.

Skillable's award-winning platform¹ helps you incorporate hands-on learning into software or platform training to accelerate product adoption. Supported by real-time scoring, instant feedback for learners and performance analytics for managers, you go from "hoping they can" to "confidently proving they can."

PROVIDE IMMERSIVE HANDS-ON LEARNING WITH "SKILLSTACK."

SkillStack is the platform that equips you with the tools to develop integrated digital learning experiences that build and validate user proficiency in controlled, secured, non-production environments. You can break free from insufficient point-and-click simulated demos and passive PowerPoint decks to quantifiable measurement. Capabilities of our platform include:

- Flexible authoring and configuration tools to create labs from scratch, augment existing labs or use our pre-configured lab templates
- Develop and deploy scored labs with interactive activity-based assessments
- Pursue performance testing for internal company credentialing or industry certifications

USE CASES FOR THE SKILLABLE PLATFORM.

Having delivered more than 25 million labs to date, we most often see organizations deploy hands-on learning for validated skills development, sales enablement, marketing activities, events and customer support. [Learn more](#) (PDF).

WORK WITH THE VIRTUAL LAB LEADER.

Leading technology and training companies rely on Skillable to help rapidly upskill their customers, partners and employees through immersive, hands-on learning.

WHAT SEPARATES OUR FULL-STACK LAB PLATFORM FROM THE OTHERS.

We say "full stack" because with us, you can centralize how you scale, build, deliver and manage your entire virtual lab environment. Instead of managing multiple platforms, developers spend more time developing and learners spend more time learning. Highlights include:

- Self-service tools so you do not need to contact us to update your own labs
- One platform for both skills development and assessment
- API and learning tool interoperability (LTI) capabilities that seamlessly integrate into your LMS, CRM, BI and/or learning system
- Faster development time with our pre-configured lab templates and ability to reuse your base environments for multiple labs
- Access to our LMS that fully integrates with our lab development solution
- Strategically selected datacenters around the world to ensure optimal performance and 24/7 support

Easily display your software and skilling instructions in a clean and intuitive interface.
