

**“Hope” is a powerful thing...except when it comes to skills development.**

You can now prove and validate that your training programs are building job-ready skills.

## UNPROVEN SKILLS ARE UNDERMINING YOUR SUCCESS.

Organizations that hope their customers, partners or employees have the necessary skills are exposing themselves to financial, operational and security risks.

When users have not been properly trained nor had to prove that they have the right skills to use technology, you encounter lower user adoption, unplanned operating costs, security vulnerabilities, frustrated employees or worse—you are begrudgingly paying for an expensive digital paper weight.

### IDENTIFY AND BRIDGE SKILLS GAPS FASTER WITH VALIDATED SKILLS DEVELOPMENT.

“Show and tell” instruction and rote “type this, click that” activities are no longer enough. Skillable’s challenge-centric learning approach enables you to validate technical competency at any stage of the learning cycle or prepare for certification by incorporating immersive, hands-on learning experiences with scored labs and assessments.

### SCORED LABS PROVIDE REAL-TIME RESULTS AND BUSINESS INTELLIGENCE.

By using scored labs, you can focus on the abilities of each learner, rather than just their raw knowledge of the subject. Performance analytics provide business intelligence to help your organization assess skill levels and then correctly prioritize skills development to meet your business goals.

*Skillable allows you to spin up real instances of IT environments, and then present issues that have to be resolved by the student. Like taking a real driver’s test in a car...or a starship. Very impressed.*

– Rick Bauer, Business Consulting and Project Management, via [G2 Reviews](#)

## HIGHLIGHTS OF HOW SKILLABLE CAN HELP YOU GO FROM “HOPE” TO “PROVE.”

Performance Analytics and Reporting	Building and Delivering	Scaling and Flexibility
<ul style="list-style-type: none"><li>✓ Access robust usage data via our fully documented API for integrations with business intelligence and analytics software</li><li>✓ Proven expertise implementing and maintaining LTI integrations</li><li>✓ Usage statistics, lab performance and recommendations for improvements</li></ul>	<ul style="list-style-type: none"><li>✓ Support for cloud environments, virtual machines, containers, coding, data science and more</li><li>✓ Platform automatically scores labs based on results produced by the learner</li><li>✓ Expertise in instructional design and challenge-centric learning</li><li>✓ Custom content team staffed with instructional designers and lab developers, available on a project basis</li></ul>	<ul style="list-style-type: none"><li>✓ Proprietary content creator and Authorized Lab Host for off-the-shelf labs you can license to accelerate and complement your efforts</li><li>✓ Consistent user experience for all learners</li><li>✓ Engineering expertise to build out highly secure, custom and available environments</li><li>✓ Established partnerships with multiple enterprise customers and vendors</li></ul>

### TRIED AND TRUSTED.

For almost 20 years we have been helping leading organizations like the ones below validate that their customers, partners and employees are building skills through effective hands-on learning experiences.
